DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-7, drawn to a method for detecting biomolecules in vivo, classified in class 435, subclass 7.2.
 - II. Claims 8-17, drawn to a circuit for detecting biomolecules in vivo, classified in class 422, subclass 82.07.
 - III. Claims 18-22, drawn to a composition of matter, classified in class 424, subclass 9.322.
2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In the instant case, the apparatus as claimed can be used to practice another and materially different process such as a process for light scattering assays.
3. Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product as claimed can be used in a materially different process such as drug delivery.

Art Unit: 1641

4. Inventions II and III are independent and distinct inventions. Invention II is a circuit for detecting biomolecules and involves an optical radiation source, an optical radiation detector and a processor circuit and Invention III does not require these limitations. Invention III is a composition comprising a material that encapsulated a labeled binding molecule and Invention II does not require this limitation.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for one group is not required for other restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary W. Counts whose telephone number is (571) 2720817. The examiner can normally be reached on M-F 8:00 - 4:30.
